#### BRIEF BIOGRAPHY

**B**orn on 18 May, 1987, Yang Cao converted his immediate social circumstance perceptions into the curiosities of the anthropological and sociological sciences during primary school, and found his interest in cosmology since secondary school, whereby during high school studies he developed the theory of black hole and white hole thermonuclear binding. He chose a path for the human rights endeavors in the choice of undergraduate studies, and engaged in nonproliferation and electromagnetic warfare research after graduation in 2010 on the environmental determinants of health, while being active in the film industry and contemporary art.

Yang experienced his first paradigm-shift during graduate research, which collected data from the World Bank and field research that pinpointed the high risks of crimes against humanity by the Xi Jinping-led dictatorial group before the consolidation of power with P. R. China's constitution changes on March 2018. His scientific and academic works and research only started to appear in the community in 2021 with the Open Access publication model's popularization and the publishers' support on a case-by-case basis.
